

MAINMAST

Following the same procedure we used to locate the Foremast, we take the **WHITE** thread by Hole "C" and thread through the correct holes in deck, on through the Control Board.

Sort out the Lines going through Hole "D" and rig them through correct hole in Channel Board, on through correct hole in your hull and Control Board.

You can now put your **BLACK** lines that are tied to the front of your mast by Holes E – I – J – K – L in their correct location.
