

NOW TAKE YOUR MASTS AND PULL THEM APART ABOUT 4". You will find you cannot put the model in the bottle by piling things on top of one another. This is why we have all our loose Lines. We can spread the mast apart which allows us to put one mast through the neck of the bottle at a time.

By the way, we tied our Yardarms to our mast to allow us to turn them enough so we can push each mast through the neck of the bottle.

TAKE YOUR MIZZEN OR BACKMAST, TURN THE YARDARMS AND PUSH THROUGH THE NECK – BOTTOM END (HOLE "C") first.

Then take the **MAINMAST**, and by following the same procedure, push through the neck of the bottle – bottom end first.

Now take the Foremast and do the same procedure.

You should now have your complete ship inside your bottle, and it will look like a complete mess, but don't worry as things will work out okay.
